Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. Artificial Intelligence and Machine Learning

Relevant Experience

Bentham AI

Dec 2025 – Feb 2026

Backend Engineer Intern: Node.js, JavaScript, Go, Docker, GCP, GitHub Actions

Remote

- Built backend automation for compliance-sensitive filings with public-site API lookups, draft generation, validation, retries, **session recovery**, and operator checkpoints, reducing manual filing time by **85%**.
- Shipped Dockerized services on **Google Cloud Run** with **GitHub Actions** release workflows, improving deployment velocity by **70%**.

Google Summer of Code

May 2025 – Sept 2025

Mentee at Invesalius: Python, VTK, wxPython, NumPy, PyTorch, ONNX

Remote

- Integrated a **FastSurfer CNN segmentation** feature for **95 anatomical brain regions**, wiring **PyTorch/TorchScript** and **ONNX/Tinygrad** inference into a mature medical-imaging application.
- Built ML preprocessing and postprocessing for **NIfTI/MGZ MRI data**, including voxel conformation, thick-slice datasets, multi-view aggregation, sagittal label remapping, LUT mapping, and generated **binary masks**.
- Reduced runtime by **87%** with async/parallel execution while debugging model-output orientation, label correctness, GPU/CPU paths, and 3D inspection workflows.

Open Source

[Contributions](#)

- Contributed maintainer-reviewed patches across **Invesalius**, **Kuadrant MCP Gateway**, **Kyverno**, **Tiled**, **CRIU**, and **VideoLAN**, spanning model-output/data correctness, backend reliability, parser robustness, and security-validation paths.

Projects

Hyoka | Python, FastAPI, PostgreSQL, SQLite, SQLAlchemy, OpenTelemetry, Docker

[GitHub](#)

- Built an **AI reliability control plane** with trace/event ingestion, **eval/replay workers**, evaluator registries, validation runs, gate decisions, promotions, audit logs, and signed manifests.
- Designed reproducible AI-system checks around immutable inputs, **content-addressed artifacts**, project-scoped API keys, database-backed worker leases, latency/cost constraints, and Dockerized services.
- Implemented an OpenAI-compatible proxy, Python SDK, Typer CLI, and dashboard/backend paths so model behavior could be observed, replayed, and gated before promotion.

Swish Support System | Python, FastAPI, React, PostgreSQL, Redis, Langfuse

[GitHub](#)

- Built a **hybrid AI + rules support system** where LLM assessments classify messy complaint semantics while deterministic policy code controls refunds, replacements, coupons, and escalations.
- Grounded responses in **order, item, evidence, customer, and policy context** with PostgreSQL/Redis state, Langfuse traces, confidence thresholds, and regression checks.
- Separated semantic understanding from business rules so AI output stayed inspectable, constrained, and testable instead of prompt-only.

Penny Lane Capital | Python, Agno, Pydantic, SQLite, Vector Memory, JSONL

[GitHub](#)

- Built a **Python multi-agent research workflow** with analyst roles, bull/bear debate, trader, risk review, portfolio approval, typed Pydantic state, SQLite checkpoints, and replayable JSONL traces.
- Added **vector memory** for semantically similar decision lessons plus validation harnesses and backtests so decisions could be compared against baselines.

Technical Skills

Languages: Python, TypeScript, JavaScript, Go

Frameworks: PyTorch, FastAPI, React, Next.js, Node.js, SQLAlchemy

Tools: NumPy, pandas, scikit-learn, ONNX Runtime, PostgreSQL, SQLite, Redis, Docker, GitHub Actions, Langfuse
