

Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. Artificial Intelligence and Machine Learning

Experience

Bentham AI

Dec 2025 – Feb 2026

Backend Engineering Intern: Node.js, JavaScript, Go, Docker, GCP, GitHub Actions

Remote

- Built backend automation for **compliance-sensitive workflows** with browser execution, public-site API lookups, retries, session recovery, validation checks, and operator checkpoints, reducing manual filing time by **85%**.
- Modeled generated drafts, API responses, screenshots, form state, and failure checkpoints as **audit-friendly workflow records** for debugging and re-running external-system failures.
- Implemented generated-draft review paths where output had to stay inspectable before deterministic filing execution.
- Shipped Dockerized Node.js/Go backend services on **Google Cloud Run** with **GitHub Actions** release workflows, improving deployment velocity by **70%**.

Google Summer of Code

May 2025 – Sept 2025

Mentee at Invesalious: Python, VTK, wxPython, NumPy, PyTorch, ONNX

Remote

- Integrated Python data-processing workflows for **95 anatomical brain regions**, wiring preprocessing, model execution, generated artifacts, progress reporting, and correctness checks into a mature application.
- Debugged large data paths, generated outputs, label correctness, GPU/CPU behavior, and reproducible inspection flows across medical-imaging datasets.
- Reduced processing runtime by **87%** through async/parallel execution while keeping output correctness and reviewability intact.

Open Source

Contributions 

- Contributed maintainer-reviewed patches across **Kuadrant MCP Gateway**, **Kyverno**, **Invesalious**, **Tiled**, **CRIU**, and **VideoLAN**, spanning backend failover behavior, parser robustness, security validation, compatibility fixes, and data/artifact correctness.

Projects

Penny Lane Capital | *Python, Agno, Pydantic, SQLite, yfinance, JSONL*

GitHub 

- Built **multi-agent trading research software** that runs OHLCV data through analyst reports, bull/bear debate, research manager, trader, risk debate, portfolio approval, and paper evaluation.
- Used Agno Workflow, typed Pydantic state, SQLite checkpoints, JSONL/full-state traces, yfinance market data, optional vector memory, and a React/Vite inspection UI.
- Added paper-style walk-forward backtests, baseline strategies, validation harnesses, no-silent-fallback tests, and reward-loop scorecards for research evaluation.

Hyoka Agent Reliability Layer | *Python, FastAPI, SQLAlchemy, PostgreSQL, OpenTelemetry*

GitHub 

- Built the production core for an **agent reliability layer**: trace ingestion, eval/replay runs, failure mining, candidate generation, gate decisions, promotions, artifacts, manifests, and audit logs.
- Designed **SQLite/PostgreSQL metadata models** for traces, suites, candidates, runs, artifacts, manifests, worker leases, gate decisions, and promotions using SQLAlchemy/Alembic.
- Implemented database-backed worker leases, content-addressed artifacts, HMAC-signed manifests, API-key isolation, and Docker Compose services for server, worker, proxy, dashboard, and Postgres.

Postificus Content Distribution Engine | *Go, Echo, React, PostgreSQL, Redis/RabbitMQ, Go-Rod*

GitHub 

- Built a centralized **content distribution engine** for writing once and publishing technical posts across Medium, Dev.to, and LinkedIn while preserving canonical URL/SEO ownership.
- Split the Go/Echo backend into API and worker paths, using PostgreSQL persistence, Redis caching, RabbitMQ queues with retry/DLQ handling, and Prometheus metrics.

Seaweed Contest Platform | *Go, Next.js, PostgreSQL, Firebase Auth, S3, Judge0*

GitHub 

- Built backend flows for contest listings, registrations, problem access, code submissions, Judge0 status polling, admin review, and live leaderboard views.

Technical Skills

Languages: Python, Go, TypeScript, JavaScript

Frameworks: FastAPI, Node.js, React, Next.js, Echo, SQLAlchemy, Pydantic

Tools: PostgreSQL, SQLite, Redis, RabbitMQ, Docker, GCP Cloud Run, GitHub Actions, Prometheus, OpenTelemetry, REST APIs, JSONL
