

Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. Artificial Intelligence and Machine Learning

Experience

Bentham AI

Dec 2025 – Feb 2026

Backend Engineering Intern: Node.js, JavaScript, Go, Docker, GCP, GitHub Actions

Remote

- Built backend automation around public-site API lookups, browser execution, retries, **session recovery**, validation checks, and operator checkpoints, reducing manual filing time by **85%**.
- Structured API responses, screenshots, generated drafts, form state, and failure checkpoints as **debuggable workflow records** for unreliable external systems.
- Containerized Node.js/Go services with **Docker**, deployed on **Google Cloud Run**, and wired **GitHub Actions** release workflows, improving deployment velocity by **70%**.
- Kept generated drafts and workflow outputs inspectable before final execution, matching regulated-product needs around traceability, review, and rollback.

Google Summer of Code

May 2025 – Sept 2025

Mentee at Invesalious: Python, VTK, wxPython, NumPy, PyTorch, ONNX

Remote

- Integrated **Python workflows** for **95 anatomical brain regions**, wiring preprocessing, PyTorch/TorchScript and ONNX/TinyGrad execution paths, generated artifacts, and correctness checks into Invesalious.
- Built model-output inspection paths around generated masks, label remapping, orientation checks, progress reporting, and reproducible artifact debugging.
- Reduced expensive processing runtime by **87%** through async/parallel execution while debugging GPU/CPU paths, large data movement, and output correctness.

Open Source

Contributions 

- Contributed maintainer-reviewed patches across **Kuadrant MCP Gateway**, **Kyverno**, **Invesalious**, **Tiled**, **CRIU**, and **VideoLAN**, spanning backend failover behavior, parser robustness, security validation, compatibility fixes, and data/artifact correctness.

Projects

Hyoka Agent Reliability Layer | *Python, FastAPI, SQLAlchemy, PostgreSQL, OpenTelemetry*

GitHub 

- Built a pluggable **agent reliability and self-improvement layer** that captures traces, evaluates behavior, mines failures, replays candidates, and promotes safer configs through release gates.
- Implemented authenticated trace/event ingestion, suites, candidates, runs, gate decisions, promotions, API keys, audit logs, artifacts, and manifests on **FastAPI + SQLAlchemy/Alembic**.
- Added OTLP/OpenInference-style ingestion, an OpenAI-compatible proxy, Python SDK hooks, Typer CLI workflows, and a Next.js dashboard for trace/run/gate inspection.

Postificus Content Distribution Engine | *Go, Echo, React, PostgreSQL, Redis/RabbitMQ, Go-Rod*

GitHub 

- Built a centralized **content distribution engine** for writing once and publishing technical posts across Medium, Dev.to, and LinkedIn while preserving canonical URL/SEO ownership.
- Split the Go/Echo backend into API and worker paths, using PostgreSQL persistence, Redis caching, RabbitMQ queues with retry/DLQ handling, and Prometheus metrics.
- Implemented direct platform API flows where available and **Go-Rod browser automation** as fallback for platforms without reliable write APIs.

Penny Lane Capital | *Python, Agno, Pydantic, SQLite, yfinance, JSONL*

GitHub 

- Built **multi-agent trading research software** that runs OHLCV data through analyst reports, bull/bear debate, research manager, trader, risk debate, portfolio approval, and paper evaluation.
- Used Agno Workflow, typed Pydantic state, SQLite checkpoints, JSONL/full-state traces, yfinance market data, optional vector memory, and a React/Vite inspection UI.

Technical Skills

Languages: Python, Go, TypeScript, JavaScript

Frameworks: FastAPI, Node.js, React, Next.js, SQLAlchemy, PyTorch

Tools: PostgreSQL, Redis, RabbitMQ, Docker, GCP Cloud Run, GitHub Actions, OpenTelemetry, Prometheus, Langfuse, ONNX, REST APIs
