

Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. Artificial Intelligence and Machine Learning

Experience

Bentham AI

Dec 2025 – Feb 2026

Backend Engineering Intern: Node.js, JavaScript, Go, Docker, GCP, GitHub Actions

Remote

- Built backend automation for compliance-sensitive workflows with public-site API lookups, retries, **session recovery**, validation checks, and operator checkpoints, reducing manual filing time by **85%**.
- Modeled generated drafts, API responses, screenshots, form state, and failure checkpoints as **reviewable workflow records** for human inspection before final execution.
- Implemented inspectable draft generation so generated outputs could be checked before deterministic backend execution.
- Shipped Dockerized Node.js/Go services on **Google Cloud Run** with **GitHub Actions** release workflows, improving deployment velocity by **70%**.

Google Summer of Code

May 2025 – Sept 2025

Mentee at Invesalious: Python, VTK, wxPython, NumPy, PyTorch, ONNX

Remote

- Built **medical-imaging segmentation workflows** for **95 anatomical brain regions**, integrating preprocessing, PyTorch/TorchScript and ONNX/TinyGrad inference, generated masks, and 3D inspection paths.
- Worked with NIfTI/MGZ MRI data, voxel conformation, thick-slice datasets, sagittal label remapping, LUT mapping, binary masks, and quick QC/debugging checks.
- Reduced expensive MRI-processing runtime by **87%** through async/parallel execution while debugging orientation, label correctness, GPU/CPU paths, and reproducible output inspection.

Open Source

Contributions 

- Contributed maintainer-reviewed patches across **Kuadrant MCP Gateway**, **Kyverno**, **Invesalious**, **Tiled**, **CRIU**, and **VideoLAN**, spanning backend failover behavior, parser robustness, security validation, compatibility fixes, and data/artifact correctness.

Projects

Hyoka Agent Reliability Layer | *Python, FastAPI, SQLAlchemy, PostgreSQL, OpenTelemetry*

GitHub 

- Built a pluggable **agent reliability and self-improvement layer** that captures traces, evaluates behavior, mines failures, replays candidates, and promotes safer configs through release gates.
- Implemented authenticated trace/event ingestion, suites, candidates, runs, gate decisions, promotions, API keys, audit logs, artifacts, and manifests on **FastAPI + SQLAlchemy/Alembic**.
- Added OTLP/OpenInference-style ingestion, an OpenAI-compatible proxy, Python SDK hooks, Typer CLI workflows, and a Next.js dashboard for trace/run/gate inspection.

Swish Food-Delivery Support Automation | *Python, FastAPI, React, PostgreSQL, Redis, Langfuse*

GitHub 

- Built support automation for food-delivery complaints with FastAPI services for agent, data, order, kitchen, fleet, trust, fraud, and public API gateway paths.
- Kept final compensation actions policy-bound while AI helped classify messy customer language, affected items, evidence relevance, desired resolution, and reply tone.

Postificus Content Distribution Engine | *Go, Echo, React, PostgreSQL, Redis/RabbitMQ, Go-Rod*

GitHub 

- Built a centralized **content distribution engine** for writing once and publishing technical posts across Medium, Dev.to, and LinkedIn while preserving canonical URL/SEO ownership.
- Split the Go/Echo backend into API and worker paths, using PostgreSQL persistence, Redis caching, RabbitMQ queues with retry/DLQ handling, and Prometheus metrics.

Seawgre Contest Platform | *Go, Next.js, PostgreSQL, Firebase Auth, S3, Judge0*

GitHub 

- Built backend flows for contest listings, registrations, problem access, code submissions, Judge0 status polling, admin review, and live leaderboard views.

Technical Skills

Languages: Python, Go, TypeScript, JavaScript

Frameworks: FastAPI, React, Next.js, Node.js, SQLAlchemy, PyTorch

Tools: PostgreSQL, Redis, RabbitMQ, Docker, OpenTelemetry, Prometheus, Langfuse, GitHub Actions, ONNX, REST APIs
