Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. Artificial Intelligence and Machine Learning

Experience

Bentham 🔗

Dec 2025 – Feb 2026

Backend Engineering Intern: Go, Node.js, Docker, GCP, Puppeteer

Remote

- Architected a resilient **Puppeteer-based Node.js automation engine** for MCA company registrations, reducing manual filing time by **85%** via intelligent network-idle monitoring, **Vision API CAPTCHA** solving, and making good use of open API endpoints on the site.
- Built a **Go notification service** with a unified API for WhatsApp/email channels, provider-agnostic MSG91 integration, strict request validation, and Controller-Service-Provider separation.
- Designed scalable, production-ready infrastructure by **containerizing with Docker** and deploying to **Google Cloud Run**.

Google Summer of Code 🔗

May 2025 – Sept 2025

Mentee at Invesalious: Python, VTK, wxPython, NumPy, PyTorch, ONNX

Remote

- Developed a tool to segment **95 subparts of the brain** from MRI images using **deep learning models** with support for both **PyTorch** and **TinyGrad**.
- Optimized processing time by **87%** by utilizing **asynchronous functions** and **parallel processing**.
- Enhanced the **3D reconstructed surface visualization** system.

Open Source

[Contributions](#) 🔗

- **Invesalious**: shipped GSoC brain-subpart segmentation for **95 MRI regions** and supporting medical-imaging fixes across segmentation progress UI, wxPython compatibility, preferences loading, and Zip Slip path validation.
- **Kuadrant**: 🔗 implemented MCP Gateway backend-outage grace handling, retaining advertised tools through transient upstream failures with `--remove-tools-grace-period`, status updates, and recovery/removal test coverage.
- **OPA**: 🔗 updated `opa fmt` to preserve multiline single-entry arrays/objects instead of collapsing deeply nested Rego structures, with v0/v1 formatter golden-test updates.
- Contributed to IOOS, VideoLAN, CRIU, and Tiled.

Projects

Murdoc

[GitHub](#) 🔗

- Built a self-hosted **AI security gateway** for LLM, HTTP tool, and MCP traffic, blocking **90%+** of prompt-injection and unsafe-tool attempts across a **150-case attack corpus** with false positives under **5%**.
- Added route profiles, RBAC runtime settings, PII redaction, allow/block rules, **OpenTelemetry** metrics/traces, health checks, and audit ledgers for **100%** of policy decisions.

Seaweed Contest Platform

[GitHub](#) 🔗

- Built backend services for registration, code submissions, sandboxed Judge0 execution, scoring, and live contest rankings for competitive programming workflows.
- Designed async Go dispatch, verdict polling, PostgreSQL result schemas, Redis-backed runtime state, and Docker deployment paths, reaching **sub-5s P95 verdict latency**.

Technical Skills

Languages: Python, Go, TypeScript

Frameworks: FastAPI, Echo, Node.js, Express, AWS

Tools: PostgreSQL, Redis, RabbitMQ, Docker, Prometheus, Go-Rod, Puppeteer
