

Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. Artificial Intelligence and Machine Learning

Experience

Bentham AI

Dec 2025 – Feb 2026

Backend Engineering Intern: Node.js, JavaScript, Go, Docker, GCP, GitHub Actions

Remote

- Built backend automation for compliance-sensitive workflows with public-site API lookups, retries, **session recovery**, validation checks, and operator checkpoints, reducing manual filing time by **85%**.
- Modeled generated drafts, API responses, screenshots, form state, and failure checkpoints as **reviewable workflow records** for human inspection before final execution.
- Implemented inspectable draft generation so generated outputs could be checked before deterministic backend execution.
- Shipped Dockerized Node.js/Go services on **Google Cloud Run** with **GitHub Actions** release workflows, improving deployment velocity by **70%**.

Google Summer of Code

May 2025 – Sept 2025

Mentee at Invesalius: Python, VTK, wxPython, NumPy, PyTorch, ONNX

Remote

- Built **medical-imaging segmentation workflows** for **95 anatomical brain regions**, integrating preprocessing, PyTorch/TorchScript and ONNX/TinyGrad inference, generated masks, and 3D inspection paths.
- Worked with NIfTI/MGZ MRI data, voxel conformation, thick-slice datasets, sagittal label remapping, LUT mapping, binary masks, and quick QC/debugging checks.
- Reduced expensive MRI-processing runtime by **87%** through async/parallel execution while debugging orientation, label correctness, GPU/CPU paths, and reproducible output inspection.

Open Source

Contributions 

- Contributed maintainer-reviewed patches across **Kuadrant MCP Gateway**, **Kyverno**, **Invesalius**, **Tiled**, **CRIU**, and **VideoLAN**, spanning backend failover behavior, parser robustness, security validation, compatibility fixes, and data/artifact correctness.

Projects

Swish Food-Delivery Support Automation | *Python, FastAPI, React, PostgreSQL, Redis, Langfuse*

GitHub 

- Built **customer-support automation for Swish food delivery** with FastAPI services, Postgres/Redis infrastructure, and a React/Vite UI for testing support flows.
- Modeled complaints using order, kitchen, fleet, trust, fraud/evidence, issue signals, and conversation state while deterministic policy code controlled coupons, refunds, replacements, and escalations.
- Added Langfuse/local JSON tracing, optional Hyoka trace export, pytest regression suites, response-quality checks, and session state so support behavior stayed reviewable across follow-ups.

Postificus Content Distribution Engine | *Go, Echo, React, PostgreSQL, Redis/RabbitMQ, Go-Rod*

GitHub 

- Built a centralized **content distribution engine** for writing once and publishing technical posts across Medium, Dev.to, and LinkedIn while preserving canonical URL/SEO ownership.
- Split the Go/Echo backend into API and worker paths, using PostgreSQL persistence, Redis caching, RabbitMQ queues with retry/DLQ handling, and Prometheus metrics.

Hyoka Agent Reliability Layer | *Python, FastAPI, SQLAlchemy, PostgreSQL, OpenTelemetry*

GitHub 

- Built trace/evaluation infrastructure for existing AI agents with canonical trace ingestion, validation runs, gate decisions, audit logs, project-scoped API keys, and replayable workflow records.
- Stored artifacts, manifests, candidates, evaluation results, and promotion metadata in **SQLite/PostgreSQL** so agent behavior changes could be inspected and reproduced.

Technical Skills

Languages: Python, Go, TypeScript, JavaScript

Frameworks: FastAPI, React, Next.js, Node.js, SQLAlchemy, PyTorch

Tools: PostgreSQL, Redis, RabbitMQ, Docker, OpenTelemetry, Prometheus, Langfuse, GitHub Actions, ONNX, REST APIs
