Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. Artificial Intelligence and Machine Learning

Experience

Bentham AI 

Dec 2025 – Feb 2026

Backend Engineering Intern: Node.js, JavaScript, Go, Docker, GCP, GitHub Actions

Remote

- Built practical AI-assisted automation that turned messy filing workflows into validated drafts, API-backed lookups, browser actions, and recoverable execution states.
- Reduced manual workflow time by **85%** by hardening multi-step public-site automation with retries and session recovery.
- Packaged and deployed services with Docker, Google Cloud Run, and GitHub Actions to keep delivery repeatable.

Google Summer of Code 

May 2025 – Sept 2025

Mentee at Invesalio: Python, VTK, wxPython, NumPy, PyTorch, ONNX

Remote

- Built scientific Python features in an open-source medical-imaging system, connecting model inference, generated artifacts, performance-sensitive processing, and visualization.
- Cut processing runtime by **87%** with async/parallel execution over large data paths.
- Worked across model output handling, UI inspection workflows, and mature-codebase constraints under mentor review.

Open Source

[Contributions](#) 

- Contributed maintainer-reviewed patches across **Kuadrant MCP Gateway**, Kyverno, IOOS, Tiled, CRIU, and VideoLAN, with emphasis on reliability, integration behavior, parser robustness, and security-validation paths.

Projects

Hyoka | *Python, FastAPI, PostgreSQL, OpenTelemetry, SQLAlchemy, Typer, Docker*

- Built AI-agent evaluation infrastructure with trace ingestion, evaluator registries, replay modes, failure mining, validation runs, gate decisions, promotions, audit logs, and signed manifests.
- Designed reproducible runs around immutable inputs, content-addressed artifacts, project-scoped API keys, worker leases, JSON schema checks, and latency/cost constraints.

Penny Lane Capital | *Python, Agno, Pydantic, SQLite, Vector Memory, yfinance, JSONL*

[GitHub](#) 

- Built a Python multi-agent research workflow with analyst roles, bull/bear debate, trader, risk review, portfolio approval, typed state, checkpoints, and replayable JSONL traces.
- Evaluated decisions with historical-market backtests, reward-loop scorecards, baseline comparisons, semantic lesson retrieval, and return/drawdown/win-rate signals.

Seaweed: Contest Platform | *TypeScript, React, Next.js, Go, PostgreSQL, Judge0, Firebase, Docker*

[GitHub](#) 

- Built a full-stack assessment platform with auth-gated problem pages, code editor, submissions, admin review, shortlisting, live rankings, and reproducible result records.
- Implemented Go judging APIs with Judge0, PostgreSQL rankings/materialized views, Redis-backed runtime state, and Docker/Kubernetes deployment for **500+ concurrent users**.

Technical Skills

Languages: Python, TypeScript, Go, SQL, C++

Frameworks: FastAPI, PyTorch, React, Next.js, Agno, VTK, wxPython

Tools: PostgreSQL, SQLite, Redis, Vector Memory, Docker, OpenTelemetry, GitHub Actions, JSONL
