

Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. Artificial Intelligence and Machine Learning, 3rd Year

Experience

Bentham AI

Dec 2025 – Feb 2026

Backend Engineering Intern: Node.js, JavaScript, Go, Docker, GCP, GitHub Actions

Remote

- Built **backend automation for legal/compliance workflows** at **Bentham AI**, combining browser execution, public-site API lookups, retries, **session recovery**, validation checks, and operator checkpoints to reduce manual filing time by **85%**.
- Implemented an **AI-assisted drafting flow** for company-name suggestions, object descriptions, and filing-field drafts while keeping generated outputs inspectable before deterministic execution.
- Modeled screenshots, API responses, generated drafts, form state, and failures as **recoverable workflow records**, making ambiguous external-system failures easier to debug and re-run.
- Shipped Dockerized **Node.js/Go backend services** on **Google Cloud Run** with **GitHub Actions**, improving deployment velocity by **70%**.

Google Summer of Code

May 2025 – Sept 2025

Mentee at Invesalious: Python, VTK, wxPython, NumPy, PyTorch, ONNX

Remote

- Integrated Python workflows for **95 anatomical brain regions**, wiring preprocessing, PyTorch/TorchScript, ONNX/TinyGrad execution paths, generated artifacts, and correctness checks into Invesalious.
- Reduced expensive processing runtime by **87%** through async/parallel execution while debugging GPU/CPU paths, large data movement, generated masks, and output correctness.

Open Source

Contributions 

- Contributed maintainer-reviewed patches across **Kuadrant MCP Gateway**, **Kyverno**, **Invesalious**, **CRIU**, and **VideoLAN**, spanning backend reliability, security validation, parser robustness, compatibility fixes, and artifact correctness.

Projects

Hyoka Agent Reliability Layer | *Python, FastAPI, SQLAlchemy, PostgreSQL, OpenTelemetry, Next.js*

GitHub 

- Built a developer-facing **AI-agent reliability layer**: trace/event ingestion, **eval/replay runs**, failure mining, candidate generation, release gates, audit logs, and project-scoped API keys.
- Implemented an **OpenAI-compatible proxy**, OTLP/OpenInference-style ingestion, Python SDK hooks for LLM/tool/retrieval events, worker leases, artifacts, manifests, and promotions.
- Designed SQLite/PostgreSQL models with SQLAlchemy/Alembic so agent behavior changes could be **reproduced, compared, promoted, or rolled back** safely.

Swish Support Automation | *Python, FastAPI, React, PostgreSQL, Redis, Langfuse*

GitHub 

- Built **LLM-assisted support automation** with FastAPI services and a React/Vite UI, carrying order, kitchen, fleet, trust, evidence, issue, and conversation context across user-facing decisions.
- Kept refunds, coupons, replacements, and escalations **policy-bound**; PostgreSQL/Redis stored session state, issue signals, trust context, and follow-up behavior.
- Added **Langfuse/local traces**, optional Hyoka trace export, pytest regression suites, response-quality checks, and deterministic fallbacks so AI behavior stayed inspectable.

Penny Lane Multi-Agent Research Workflow | *Python, Agno, Pydantic, SQLite, JSONL, React/Vite*

GitHub 

- Built a **multi-agent research workflow** with analyst, bull/bear debate, research manager, trader, risk-review, portfolio-approval, and evaluation stages wired through typed state.
- Used **Pydantic state**, SQLite checkpoints, JSONL/full-state traces, yfinance market data, optional vector memory, baseline comparisons, and validation harnesses.

Postificus Content Distribution Engine | *Go, Echo, React, PostgreSQL, Redis, RabbitMQ, Docker*

GitHub 

- Built Go/Echo **REST APIs and worker services** with PostgreSQL persistence, Redis state/cache, RabbitMQ retry/DLQ jobs, Docker services, and Prometheus metrics.
- Kept long-running external workflows recoverable with saved state, retries, health checks, browser fallback execution, and clear UI status around publish/sync activity.

Technical Skills

Languages: Python, Go, TypeScript, JavaScript

Frameworks: FastAPI, Node.js, React, Next.js, Echo, SQLAlchemy, PyTorch, Pydantic

Tools: PostgreSQL, Redis, RabbitMQ, Docker, GCP Cloud Run, GitHub Actions, OpenTelemetry, Prometheus, Langfuse, ONNX
