Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. Artificial Intelligence and Machine Learning

Experience

Bentham AI

Dec 2025 – Feb 2026

Backend Engineering Intern: Go, Node.js, Docker, GCP, Puppeteer, GitHub Actions

Remote

- Built a resilient **Puppeteer/Node.js workflow** for MCA filings with session handling, CAPTCHA handoff, form retries, and state recovery, reducing manual filing time by **85%**.
- Optimized an **AI-assisted company-registration pipeline** for unique company-name suggestions, descriptions, and filing-field drafts, reducing manual drafting/rework across MCA workflow preparation.
- Containerized backend services with **Docker**, wired **GitHub Actions** deployments to **Google Cloud Run**, and improved release velocity by **70%**.

Google Summer of Code

May 2025 – Sept 2025

Mentee at Invesalious: Python, VTK, wxPython, NumPy, PyTorch, ONNX

Remote

- Built medical-image segmentation tooling for **95 brain subparts**, handling model inference, orientation, preprocessing, and large-volume data paths with reproducible outputs.
- Reduced segmentation runtime by **87%** using asynchronous and parallel execution while preserving inspection workflows for generated masks and 3D surfaces.
- Worked in a mature open-source codebase with review constraints, compatibility concerns, and careful integration into existing user workflows.

Open Source

[Contributions](#)

- Contributed patches across Invesalious, IOOS, VideoLAN, CRIU, Tiled, Kyverno, and Kuadrant, working inside existing maintainer security, reliability, and review expectations.

Projects

Murdoc | *Python, FastAPI, MCP, OpenTelemetry, Prometheus, Docker*

[GitHub](#)

- Built a self-hosted **AI security gateway** for LLM, HTTP tool, and MCP traffic, blocking **90%+** of prompt-injection and unsafe-tool attempts across a **150-case attack corpus** with false positives under **5%**.
- Added route profiles, RBAC runtime settings, PII redaction, allow/block rules, **OpenTelemetry** metrics/traces, health checks, and audit ledgers for **100%** of policy decisions.

Swish Support System | *Python, Go, FastAPI, Gin, PostgreSQL, Redis, Langfuse*

[GitHub](#)

- Built policy-grounded support workflows where LLM reasoning proposed actions but deterministic services enforced refund, remake, coupon, trust, and escalation rules.
- Carried customer/order context across turns and traced high-risk decisions with Langfuse/local logs, keeping agent actions inspectable rather than prompt-only.

Penny Lane Capital (Tradeage) | *Python, Agno, Pydantic, SQLite, yfinance, JSONL*

- Built an **Agno Workflow** multi-agent research system with analyst roles, bull/bear debate, trader, risk review, and portfolio approval using Pydantic state, checkpoints, memory, and JSONL traces.
- Evaluated agent decisions with historical-market backtests, reward loops, validation harnesses, and **5 baselines**, producing return, drawdown, and win-rate scorecards across market windows.

Technical Skills

Languages: Go, Python, TypeScript

Frameworks: FastAPI, Gin, Echo, Node.js

Tools: MCP, OpenTelemetry, Prometheus, PostgreSQL, Redis, Docker, GitHub Actions
