Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. Artificial Intelligence and Machine Learning

Experience

Bentham AI 

Dec 2025 – Feb 2026

Backend Engineering Intern: Go, Node.js, Docker, GCP, Puppeteer, GitHub Actions

Remote

- Built a resilient browser-automation backend for MCA filings with retries, session recovery, public-site API lookups, and state validation, reducing manual filing time by **85%**.
- Optimized an AI-assisted company-registration pipeline for name suggestions, descriptions, and filing-field drafts, reducing manual drafting/rework across workflow preparation.
- Containerized services with Docker, deployed to Google Cloud Run, and automated releases through GitHub Actions, improving deployment velocity by **70%**.

Google Summer of Code 

May 2025 – Sept 2025

Mentee at Invesalio: Python, VTK, wxPython, NumPy, PyTorch, ONNX

Remote

- Built MRI segmentation tooling for **95 anatomical regions**, integrating model inference, preprocessing, and visualization into an existing medical-imaging application.
- Reduced processing time by **87%** through async/parallel execution and fewer repeated passes across large medical volumes.
- Contributed production-facing changes under open-source review constraints, compatibility concerns, and careful debugging across existing workflows.

Open Source

[Contributions](#) 

- Contributed patches across Invesalio, IOOS, VideoLAN, CRIU, Tiled, Kyverno, and Kuadrant, working inside maintainer review processes for reliability, security, and integration quality.

Projects

Seaweed Contest Platform | *Go, PostgreSQL, Redis, Judge0, AWS, Docker, Kubernetes*

[GitHub](#) 

- Built a backend-heavy contest platform with async judging, score calculation, live rankings, runtime state, and deployment paths across Docker/Kubernetes on AWS.
- Modeled durable users/submissions/results in PostgreSQL and used Redis for low-latency contest state, keeping evaluation workflows responsive under concurrent contest load.

Swish Support System | *Python, Go, FastAPI, Gin, PostgreSQL, Redis, Langfuse*

[GitHub](#) 

- Built an **AI-assisted support backend** where LLM calls classify messy customer complaints, intent, severity, ambiguity, and photo-evidence usefulness while deterministic code controls refund, replacement, coupon, and escalation policy.
- Maintained per-conversation context, evidence artifacts, order/customer state, and traceable actions across multi-turn workflows with PostgreSQL, Redis, Langfuse/local traces, and regression tests for edge cases.

Postificus | *Go, Echo, Rod, PostgreSQL, Redis, RabbitMQ, Docker, Prometheus*

[GitHub](#) 

- Built Go/Echo backend services for a content distribution platform using browser automation, REST APIs, RabbitMQ workers, Redis autosave, and PostgreSQL persistence.
- Added retries, DLQs, circuit-breaker isolation, health checks, and Prometheus metrics so unreliable external browser/API workflows stayed recoverable across distributed workers.

Technical Skills

Languages: Go, Python, TypeScript, C++

Frameworks: Echo, FastAPI, Gin, Node.js

Tools: PostgreSQL, Redis, RabbitMQ, Docker, Kubernetes, AWS, GCP, Prometheus, OpenTelemetry, GitHub Actions
