Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. Artificial Intelligence and Machine Learning

Experience

Bentham AI 

Dec 2025 – Feb 2026

Product Engineering Intern: Node.js, JavaScript, Go, Docker, GCP, GitHub Actions

Remote

- Built regulated-workflow automation around company-registration filings, combining structured backend state, public-site API lookups, operator review, retries, and browser execution.
- Reduced manual filing time by **85%** by hardening multi-step workflows with session recovery, state validation, and failure-aware execution.
- Packaged and deployed services with Docker, Google Cloud Run, and GitHub Actions so releases stayed repeatable under fast iteration.

Google Summer of Code 

May 2025 – Sept 2025

Mentee at Invesalio: Python, VTK, wxPython, NumPy, PyTorch, ONNX

Remote

- Built Python tooling in a mature open-source codebase, integrating preprocessing, model execution, generated masks, large data paths, and inspection flows.
- Reduced runtime by **87%** using asynchronous and parallel execution over expensive NumPy/PyTorch-style workflows.
- Debugged cross-module issues across UI, data transformation, generated artifacts, label mapping, and model-output handling.

Open Source

[Contributions](#) 

- Contributed maintainer-reviewed patches across **Kuadrant MCP Gateway** and **Kyverno**, plus CRIU, VideoLAN, Tiled, IOOS, and Invesalio, spanning backend integration behavior, parser robustness, security validation, and compatibility fixes.

Projects

Seaweed: Contest Platform | *Go, TypeScript, React, PostgreSQL, Redis, Judge0, Docker, Kubernetes*

[GitHub](#) 

- Built product and platform paths for registration, submissions, sandboxed code execution, admin review, live rankings, and durable result records across contest traffic.
- Designed async verdict polling, PostgreSQL result schemas, Redis-backed runtime state, Docker/Kubernetes deployment, and **sub-5s P95 verdict latency**.

Postificus | *Go, Echo, Rod, PostgreSQL, Redis, RabbitMQ, Docker, Prometheus*

[GitHub](#) 

- Built browser-automation-backed product workflows with REST APIs, RabbitMQ workers, Redis autosave, PostgreSQL persistence, durable job status, and recoverable publishing tasks.
- Added retries, DLQs, circuit-breaker isolation, health checks, and Prometheus metrics so long-running API/browser workflows stayed observable and fault-tolerant.

Penny Lane Capital | *Python, Agno, Pydantic, SQLite, Vector Memory, yfinance, JSONL*

[GitHub](#) 

- Built a Python multi-agent research workflow with analyst roles, bull/bear debate, trader, risk review, portfolio approval, typed state, checkpoints, and replayable JSONL traces.
- Evaluated decisions with historical-market backtests, reward-loop scorecards, semantic lesson retrieval, and return, drawdown, win-rate, and risk signals.

Technical Skills

Languages: Go, Python, TypeScript, JavaScript, SQL

Frameworks: FastAPI, Echo, React, Next.js, Node.js, PyTorch

Tools: PostgreSQL, Redis, Docker, Kubernetes, AWS, GCP, GitHub Actions, OpenTelemetry, Prometheus, Judge0
