

Education

Dayananda Sagar College of Engineering

Bengaluru, India

B.E. Artificial Intelligence and Machine Learning

Experience

Bentham AI

Dec 2025 – Feb 2026

Backend Engineering Intern: Node.js, JavaScript, Go, Docker, GCP, GitHub Actions

Remote

- Owned **backend automation** for legal/compliance workflows at Bentham AI , combining **browser execution**, public-site API lookups, retries, **session recovery**, validation checks, and operator checkpoints to reduce manual filing time by **85%**.
- Built an **AI-assisted drafting flow** for company-name suggestions, object descriptions, and filing-field drafts while keeping **generated outputs inspectable** before deterministic execution.
- Modeled **screenshots, API responses, generated drafts, form state, and failures** as recoverable workflow records, making ambiguous external-system failures easier to **debug and re-run**.
- Shipped Dockerized **Node.js/Go services** on **Google Cloud Run** with **GitHub Actions** release workflows, improving deployment velocity by **70%**.

Google Summer of Code

May 2025 – Sept 2025

Mentee at Invesalious: Python, VTK, wxPython, NumPy, PyTorch, ONNX

Remote

- Integrated **Python medical-imaging workflows** for **95 anatomical brain regions**, wiring preprocessing, **PyTorch/TorchScript**, ONNX/TinyGrad execution paths, generated artifacts, and correctness checks into Invesalious.
- Built **model-output inspection** paths around generated masks, label remapping, orientation checks, progress reporting, and reproducible artifact debugging.
- Reduced expensive processing runtime by **87%** through async/parallel execution while debugging **GPU/CPU paths**, large data movement, and output correctness.

Projects

Swish Food-Delivery Support Automation | Python, FastAPI, React, PostgreSQL, Redis, Langfuse

GitHub 

- Built an **LLM-assisted support workflow** with **FastAPI services** and a **React/Vite UI**, carrying order, kitchen, fleet, trust, evidence, issue, and conversation context across user-facing decisions.
- Kept compensation actions **policy-bound** while AI handled **messy customer language**; **PostgreSQL/Redis** stored session state, issue signals, trust context, and follow-up behavior.
- Added **Langfuse/local traces**, optional Hyoka trace export, pytest regressions, response-quality checks, and **deterministic fallbacks** so AI behavior stayed inspectable.

Hyoka Agent Reliability Layer | Python, FastAPI, SQLAlchemy, PostgreSQL, OpenTelemetry

GitHub 

- Built an **agent reliability and evaluation layer**: **trace/event ingestion**, **eval/replay runs**, failure mining, candidate generation, **release gates**, audit logs, and project-scoped API keys.
- Implemented an **OpenAI-compatible proxy**, OTLP/OpenInference-style ingestion, worker leases, artifacts, manifests, promotions, and a **Next.js dashboard** for trace/run/gate inspection.
- Designed **SQLite/PostgreSQL metadata models** with SQLAlchemy/Alembic so agent behavior changes could be **reproduced, compared, promoted, or rolled back** safely.

Postificus Content Distribution Engine | Go, Echo, React, Vite, PostgreSQL, Redis/RabbitMQ, Go-Rod

GitHub 

- Built a full-stack **content distribution product** with **React/Vite editor flows**, platform connection management, activity/status views, and **Go/Echo REST APIs**.
- Used **PostgreSQL persistence**, Redis state/cache, **RabbitMQ retry/DLQ jobs**, Docker services, Prometheus metrics, direct APIs, and **browser fallback execution** for fragmented third-party platforms.
- Kept long-running external workflows **recoverable** with saved state, retries, health checks, worker metrics, and clear **UI status** around publish/sync activity.

Penny Lane Multi-Agent Research Workflow | Python, Agno, Pydantic, SQLite, JSONL, React/Vite

GitHub 

- Built a **multi-agent workflow** with analyst, bull/bear debate, research manager, trader, risk-review, portfolio-approval, and evaluation stages wired through **typed state**.
- Used **Pydantic state**, SQLite checkpoints, **JSONL/full-state traces**, baseline comparisons, validation harnesses, and a **React/Vite inspection UI** for agent-output review.

Technical Skills

Languages: TypeScript, JavaScript, Python, Go

Frameworks: React, Next.js, FastAPI, Node.js, Echo, SQLAlchemy, PyTorch

Tools: PostgreSQL, Redis, Docker, GCP Cloud Run, GitHub Actions, Langfuse, OpenTelemetry, Prometheus
